**Introducing a series of three pastel colourways in our Sediment wallpaper - Sunset, Dawn and Greystone.**

Sediment is a popular, versatile design and the new colours introduce gentle, soft tones that speak of the ephemeral nature of light and movement.

Sunset, Dawn & Greystone

Drawing inspiration from sedimentary rock in New Zealand, Sediment references layers of geology, time and history. As a large-scale mural format, Sediment builds colour and intensity from ceiling to floor and explores a transition from light to dark.

The new colours are designed to complement and accompany the jewel-like colours of the original release – Turquoise, Earth, Forest and Blue.

Sediment in Turquoise (L) and Earth (R)

Sediment in Forest (L) and Blue (R)

Sediment is available on a non-woven pearl paper with subtle lustre suitable for residential and light commercial use, along with a commercial grade substrate for heavy duty traffic areas. Samples are available through our website.
